- Unzip downloaded file to get wordpress folder
- ◆ If you installed Bitnami W(L,M)AMP, copy it in apache2/htdocs

 If you installed XAMPP, copy it in the corresponding folder

- Access <a href="http://localhost:8080/wordpress">http://localhost:8080/wordpress</a>
  - ◆ It is the same as <a href="http://127.0.0.1/wordpress">http://127.0.0.1/wordpress</a>
  - ◆ If you installed Bitnami W(L,M)AMP in a different port (PN), you have to Access it: <a href="http://localhost:PN/wordpress">http://localhost:PN/wordpress</a>
- This initiates the installation process

 We need to provide a database, so let's create it first thing

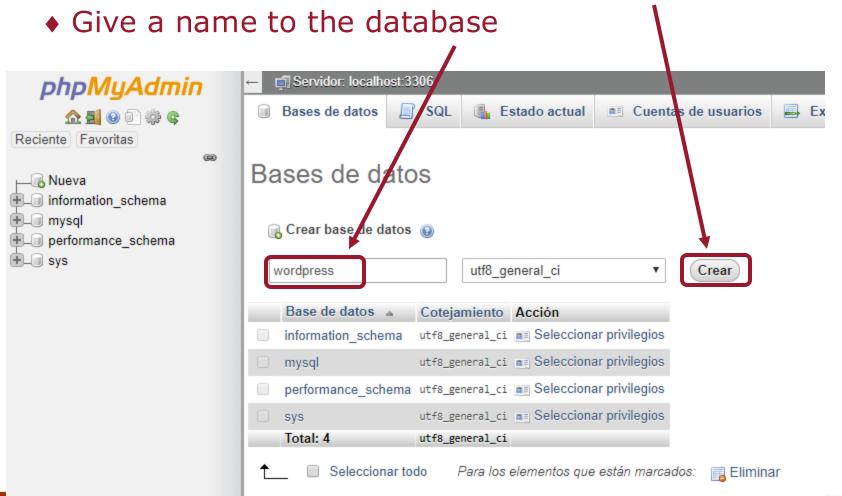

## Wordpress installation – Database creation

- Access phpMyAdmin
  - ♦ Go to Bases de datos

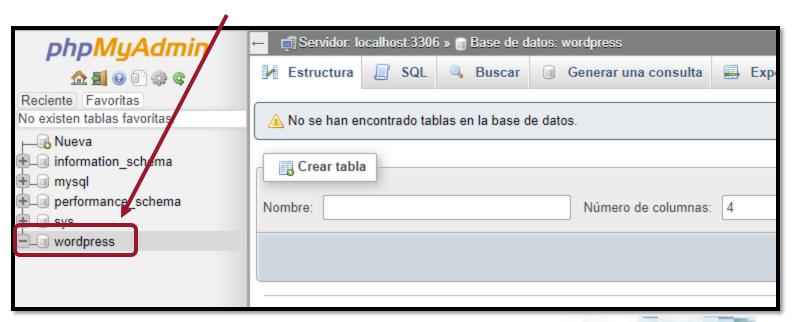

## Wordpress installation – Database creation

Create database

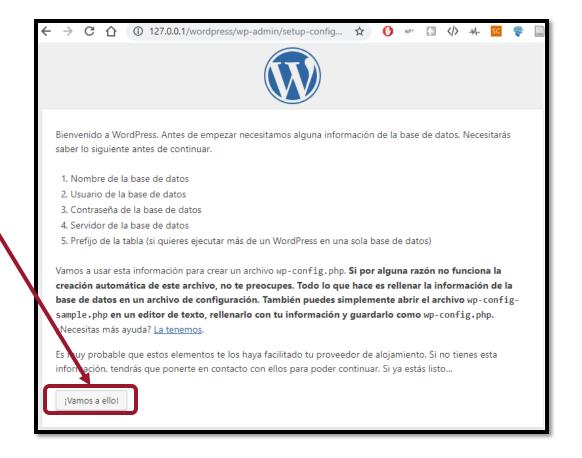

## Wordpress installation – Database creation

- Database is created
  - ◆ It is empty
  - It will be populated in the Wordpress installation

Let's continue the installation

Specify database connection details

Continue the installation

Enter some info

écnica superior de ingeniería informática de Sevilla

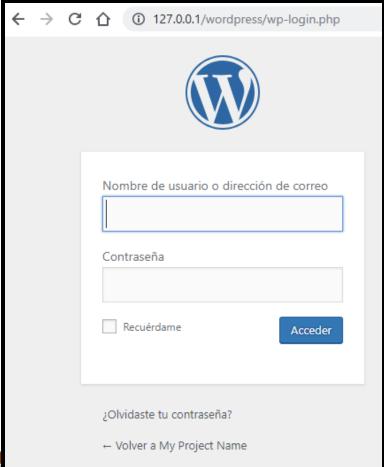

Installation completed

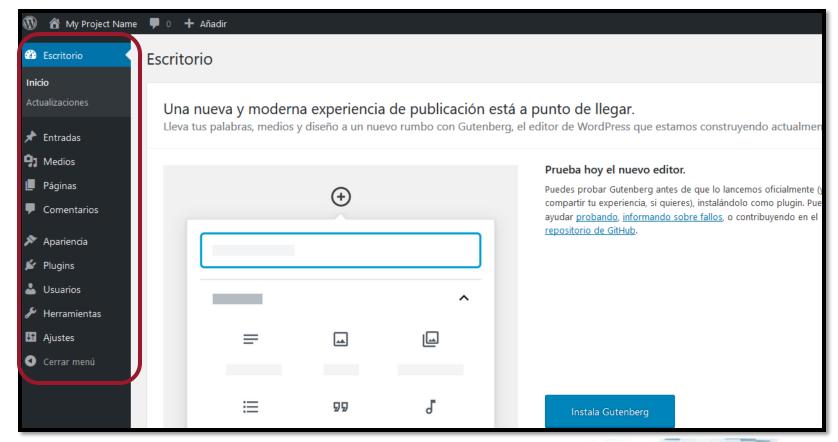

#### **Outline**

- Wordpress installation
- Wordpress
- ◆ 1st and 2nd deliverables (CMS)

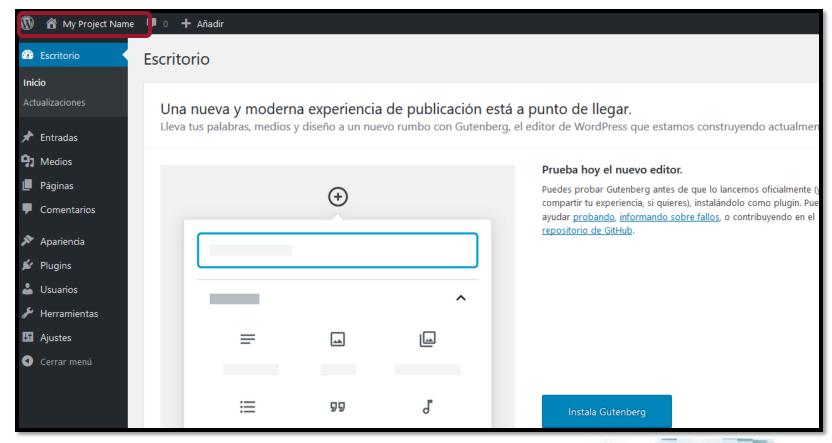

Access wordpress: http://localhost:8080/wordpress/wp-login.php

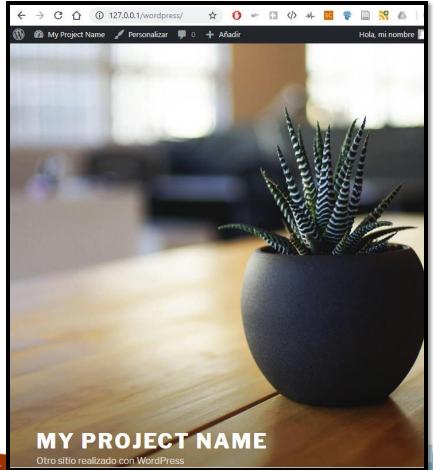

Study the configuration panel

At any point in time, you can access the current state of your website

 At any point in time, you can access the current state of your website

- There are hundreds of tutorials online for learning Wordpress
  - Many of them on <a href="https://www.wpbeginner.com/">https://www.wpbeginner.com/</a>

 Wordpress is very intuitive and building websites is simple

#### **Outline**

- Wordpress installation
- Wordpress
- 1st and 2nd deliverables (CMS)

- ♦ Sprints 1 and 2 of CMS. The final version must include:
  - Requirements with REM
  - Analysis
  - Design
  - Implementation
- ◆ In every deliverable
  - SCRUM backlog, sprint backlog and burndown chart
- Don't forget to document:
  - Collaborative software (justify your selection)
  - Version control software (if you use any)

- Requirements with REM (elicited after an interview)
  - ♦ Goals
  - ◆ Information Requirements
  - ◆ UI Requirements
  - ◆ Functional Requirements
  - ♦ Non-functional Requirements
  - Business Rules

#### Analysis document

- Mockups of how the website will look like
  - You should show prototypes of your expected webpages and write a description
  - Use software such as Balsamiq
- Class diagram
  - ◆ Capturing menus and the main page
- All must be documented in a PDF file

- Design document (pdf)
  - Determine plugins according to your needs and compare at least three of each type
    - ◆ Decide the plugins according to different factors
      - Last update
      - Number of downloads
      - User rating
      - **–** ...
    - ◆ Compulsory to use plugins for Security, Cache, Analytics (specially with Buddypress) and SEO
      - Again, compare some of them with the same functionality and decide which one to use
    - ♦ You can use tables to show the comparisons

- Design document (pdf)
  - Determine themes according to your needs and compare at least three of them
    - ◆ Explain why you chose the chosen one

- ◆ Implementation (pdf) file
  - Show screenshots of your page
    - ◆ Explain each of them

#### ◆ Planification (pdf) file

- Document selected collaborative software (justify your selection)
- Document version control software (if you use any)
- SCRUM methodology (decide which software to use):
  - Show project backlog
  - Show sprint backlog
  - Show burndown chart
